                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             멂
                                                The patent discloses novel human cytokine, ZCYTO18 protein and its corresponding DNA. ZCYTO18 protein induces proliferation of cells expressing zcytor11, a receptor for ZCYTO18 or induces cytotoxicity in K5626 cells. ZCYTO18 DNA is useful for detecting a genetic abnormality in a patient. ZCYTO18 DNA and its antibodies are useful for detecting cancer and inflammation. ZCYTO18 protein is useful for killing cancer cells. It is useful for increasing platelets in a patient or injured tissue. It is also used in gene therapy. The present sequence is a cDNA encoding mouse cytokine, ZCYTO18.

                                                              This DNA encodes T cell derived inducible factor (TIF) alpha identified by subtraction cloning from a murine lymphoma cell line BW5147 in the presence or absence of interleukin 9 (II-9). BW3147, can be grown in vitro, without the need to add any cytokines to its culture medium. Many II-9 activities are mediated by activation of STAT transcription factors. The novel TIFs were expressed in the presence of II-9, but not in its absence. TIFs induce STAT activation in cells. They can be used, e.g. in the stimulation of regeneration of targeted tissues. Their inhibitors or antagonists can be used to retard, prevent or inhibit differentiation of other tissues. The TIFs and their coding sequences are useful in the treatment of asthma, allergies and tymphoma (claimed). They are also useful for identifying compounds that inhibit or activate T cell induced factor activity in a cell (claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             exon

The TIF proteins (or their muteins) may be used to test IL-9 ant/agonists for their potency against lymphomas, immune system disorders, allergies, asthma, acquired immunodeficiency syndrome (AIDS), autoimmune diabetes and thyroiditis. TIF molecules promote regeneration or inhibit differentiation of tissue types in which they are active and therefore be used to develop treatments for melanomas and hepatomas. The present sequence a partial genomic sequence for mouse TIFalpha.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (DUMO/)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to nucleic acid molecules encoding T cell derived inducible factors (TIFs) also known as interleukin-21 (II-21) TIF polynucleotides are upregulated by the cytokine, II-9. II-TIF or II-21 molecules are implicated in activation of STAT transcription factors, acute phase proteins and inflammation. The present sequence is mouse TIF alpha genomic DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Stimulating expression of STAT transcription factor and inducing production of acute phase protein in a cell, involves contacting capable of expressing STAT with T cell derived inducible factors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Dumoutier L,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            27-JUL-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              T cell derived inducible factor; TIF; interleukin-21; IL-21; ISTAT transcription factor; acute phase protein; inflammation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Example

                                                                                                                          The present invention relates to an isolated nucleic acid molecule, which encodes a T cell derived inducible factor comprising an amino acid sequence encoded by 6 defined nucleotide sequences. The nucleic acid molecules are shown to be up regulated by the cytokine interleukin-9 (TL-9) and are described as T Cell Derived Inducible Factors (TIFs). The invention is used in protein therapy. The nucleic acid molecules encode proteins which induce STAT activation in cells. They can be used, for example, in the stimulation of regeneration of targetted tissues. Further, their inhibitors or antagonists can be used to retard, prevent or inhibit differentiation of other tissues. The present sequence is

                                                                                                                                                                                                                                                                                        This DNA encodes T cell derived inducible factor (TIF) beta identified by subtraction cloning from a murine lymphoma cell line BW5147 in the presence or absence of interleukin 9 (IL-9). As compared to the coding region for TIF-alpha (see AAA28816), that of TIF-beta has six silent changes. There are two changes which result in an inconsequential amino acid change (at both of positions 36 and 103, Val in TIF-alpha becomes Ile in TIF-beta). There is also a more significant change at position activation of STAT transcription factors. The novel TIFs were expressed in the presence of II-9, but not in its absence. TIFs induce STAT cactivation in cells. They can be used, e.g. in the stimulation of creative can be used to retard, prevent or inhibit differentiation of other tissues. The IIFs and their coding sequences are useful in the treatment of asthma, altergies and lymphoma (claimed). They are also useful for identifying compounds that inhibit or activate T cell induced factor activity in a

Mus musculus mRNA for TIF beta
AU249492
AU249492
AU249492.1 GI:6996555
IL-TIF gene; TIF beta protein.
Mus musculus
              Dumoutier, L., Louahed, J. and Renauld, J.C. Cloning and characterization of TIF, a new induced by IL-9 Immunology 164, 1814-1819 (2000) 2 (bases 1 to 1118) Renauld, J.C.
                                                                                                                 Mammalia; Eutheria; Rodentia; 1 (bases 1 to 1118)

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

GENERAL INFORMATION:

APPLICANT: Dumoutier, Laure
APPLICANT: Louhed, Jamila
APPLICANT: Renauld, Jean-Christophe
APPLICANT: Renauld, Jean-Christophe
TITLE OF INVENTION: Isolated Nucleic Acid Molecules which Encode T Cell Inducible !
TITLE OF INVENTION: (TITS) The Proteins Encoded, and Uses Thereof
TITLE REFERENCE: LUD 5543.2

CURRENT APPLICATION NUMBER: US/09/751,797

CURRENT FILING DATE: 2000-12-29

PRIOR APPLICATION NUMBER: 09/419,568

PRIOR APPLICATION NUMBER: 09/419,568

PRIOR FILING DATE: 1999-10-18

DEPTOR ADDITION NUMBER: 1999-10-18

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ś
                                                                                                                                                                  Sequence 8, Application US/09751797
Patent No. US20010024652A1
GENERAL INFORMATION:
APPLICANT: Dumoutier, Laure
APPLICANT: Louhed, Jamila
APPLICANT: Renauld, Jean-Christophe
APPLICANT: Renauld, Jean-Christophe
TITLE OF INVENTION: Isolated Nucleic Acid Molecules which Encode '
TITLE OF INVENTION: (TIPS) The Proteins Encoded, and Uses Thereo
FILE REFERENCE: LUD 5443.2
CURRENT APPLICATION NUMBER: US/09/751,797
CURRENT FILING DATE: 2000-12-29
PRIOR APPLICATION NUMBER: 09/419,568
PRIOR FILING DATE: 1998-10-18
PRIOR APPLICATION NUMBER: US/09/178,973
PRIOR APPLICATION NUMBER: US/09/178,973
PRIOR FILING DATE: 1998-10-26
                                                                                                                                                                                                                                                                    1021
                                                                                                                                                                                                                                                                                              1023
                                                                                                                                                                                                                                                                                                                        961
                                                                                                                                                                                                                                                                                                                                                   963
                                                                                                                                                                                                                                                                                                                                                                               901

GENERAL INFORMATION:

APPLICANT: Dumoutier, Laure
APPLICANT: Louhed, Jamila
APPLICANT: Renauld, Jean-Christophe
TITLE OF INVENTION: Isolated Nucleic Acid Molecules which
TITLE OF INVENTION: (ISOlated Nucleic Brooded, and "
FILE REFERENCE: LUD 5543.2
CURRENT APPLICATION NUMBER: US/09/751,797
CURRENT FILING DATE: 2000-12-29
PRIOR APPLICATION NUMBER: 09/419,568
PRIOR APPLICATION NUMBER: 09/419,568
PRIOR FILING DATE: 1999-10-18
PRIOR APPLICATION NUMBER: US09/178,973
                                                                                                                          RESULT 7
US-09-751-797-29
; Sequence 29, Application US/09751797
; Patent No. US20010024652A1
